

ATTESTNODE / KILN / CONCEPT STUDY

AI-generated visual direction, not implemented software. Typography and microcopy in artwork are exploratory.

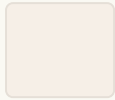

DIRECTION 01

Kiln

An object worth keeping.

Porcelain, architectural red and a dramatic shift in scale. The app feels like a small crafted object rather than a settings panel.

Palette & type

Porcelain
#F6EFE7

Vermilion
#C63A2E

Oxblood
#580F12

Clay
#D9C6B8

Graphite
#2E2E2E

Aa / 002

Expressive serif display; humanist system sans for controls; monospaced fingerprints.

Visual principle

Use light and material as the flourish. A huge close crop opens into the complete Fold when the receipt is ready.

Motion

Gather → Form → Settle. A single 900–1200 ms reveal, then stillness. Button press: 100 ms depression, with no glow on the destructive/consent action.

Keep it disciplined

Do not turn this into beige luxury packaging. Keep a large saturated red field, asymmetric crop and assertive typography. Avoid tiny, widely tracked body copy.

Build effort

Moderate. Pre-rendered artwork plus a masked reveal can establish the visual language before a live 3D renderer exists.

Same steps. Stronger character.

01 / Connect

A warm seam of light traces an incomplete form. A short status label stays stationary beside it.

02 / Reveal

Pull back from the ceramic surface to the whole sculpture. Reveal the token number only after confirmation.

03 / Handoff

Switch to a calm porcelain sheet with two matching numeric key fingerprints. Keep the sculpture out of the consent decision.

Rules shared by all three directions

- The accepted journey stays intact. Launch automatically connects; there is no new “Keep running” gate or second claim introduced by a concept button.
- Use “Verifying this app”, “Connecting to a peer”, “Receipt confirmed” and “Preparing your Fold” for distinct real states. A rendering delay is not a network failure.
- The consent screen always compares numeric key fingerprints and explains the account-control change. The user signs their own copy; they do not transfer their NFT to another developer.
- Never imply verified human identity, invent peer counts, or use the Fold’s six ribbons as a peer count. Artwork captions remain exploratory; these rules govern implementation.
- Body and control text must stay readable at normal size. Keep status visible in words as well as color. Honor Reduce Motion; idle scenes should settle and stop consuming resources.
- Start with a static native screen, then add a bounded reveal. Reuse the real procedural Fold renderer; these new concept shapes are not replacement minted NFT images.
